

ARCTIC

Arctic S **11-0-0-75** uses Shell Thiogro technology to create a unique micronized elemental Sulphur that quickly breaks down to become plant available to meet the plants immediate needs, and season long needs.

Arctic S delivers:

- Low salt index for safer seed placement and improved Phos uptake
- Save time and money by handling less product due to the high analysis.
- Seed row, sideband, MRB, and broadcast application.
- Less prone to caking than AMS
- Can be blended with any common fertilizers.
- Less leaching in wet seasons resulting in more S available during pod fill.

ARCTIC

Testimonials

"We are now on our third season of using Arctic S, the low salt index and high S content are a perfect fit for our customers." Matt Owens, Emerge Ag

"We enjoyed handling less product, and our canola is probably the best we have ever seen on the farm." Brancoh Farms, Watrous, SK

Application Features

Blends well with most conventional fertilizer

SGN: 300

Bulk Density: 62.5 lbs/ft³

Angle of Repose: 32 Low

Salt Index: 17.8
